

## Lawful Interception Solutions for IP Networks

AQSACOM offers the world's first comprehensive lawful interception solution for massive-scale public IP networks. Our IP interception systems are built upon AQSACOM's time and field-proven approach to lawful interception architecture, with:

- Applicability to ADSL, dial-up, cable modem, satellite, 802.11, fixed, and other access technologies.
- Multilayer EOIP (Everything over IP) lawful interception for Voice over IP and other IP-based applications and services.
- A highly modular design that can be readily integrated with AQSACOM voice interception solutions.
- Easy-to-use human interface requiring minimal training.
- Operation on off-the-shelf hardware for easy serviceability and low-cost parts replacement.
- Interoperability with all major IP networking equipment vendors.
- Conformance to emerging standards, such as ETSI DTS 102.232/234, and local law enforcement requirements to effectively deliver interception data to law enforcement agencies.

### A typical AQSACOM IP Lawful Interception Solution

**ALIS**, the AQSACOM Lawful Interception Management System, comprises two components: ALIS-m for target provisioning and ALIS-d for data interception management. ALIS-m operates in conjunction with the service provider's network access switching and servers (e.g., RADIUS) to determine the target's originating IP address (static or dynamic). Once this address is known, ALIS-d routes a secure copy of the targeted IP traffic to the law enforcement agency for analysis.
