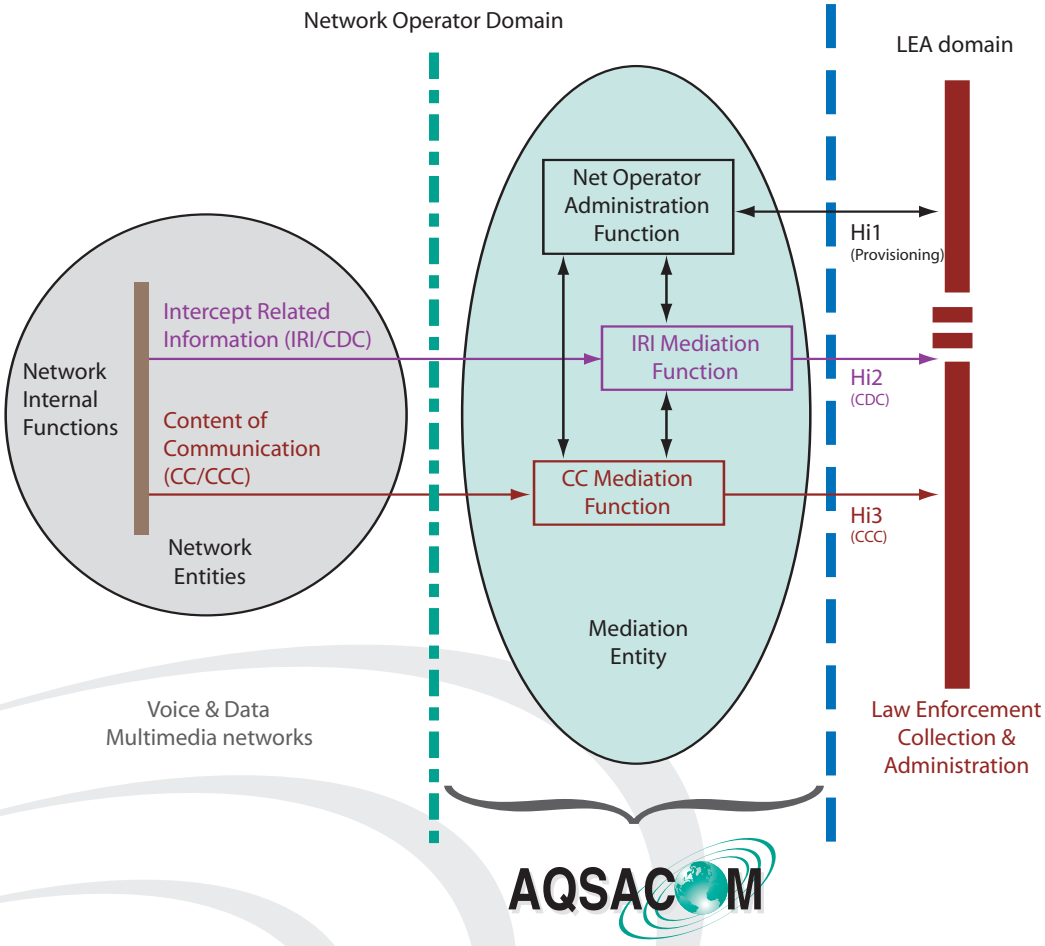
AQSACOM develops and markets real time Lawful Interception, Mobility Tracking and Surveillance solutions. With its core business focused on lawful interception and related applications for over eleven years, AQSACOM provides end-to-end turnkey solutions for fulfilling lawful interception requirements anywhere in the world, especially over highly heterogeneous networking and services environments. AQSACOM's diversified customer portfolio includes clients from more than 30 countries, covering geographical areas as diverse as Central and Eastern Europe, Asia-Pacific, North America, Africa and the Middle-East.

AQSACOM and Standards

Not only do our solutions conform to international lawful interception standards, we have helped to develop these standards.

Architecture for Lawful Interception of Voice and IP Traffic



Lawful interception systems comprise a) extraction of call information and content from the network entities (voice or IP network equipment) and b) management and formatting of the data for effective delivery to the law enforcement agencies. AQSACOM offers comprehensive solutions to complete lawful interception in conformance to standards such as CALEA J-STD-025, ETSI ES-201-671, ETSI DTS 102.232/234, 3GPP 33.107 and regional lawful interception standards and requirements.

. . . Shaping Lawful Interception
